PROFESSIONAL SUMMARY

Computer Science student focused on reproducible development environments, Linux systems, and technical architecture. Experienced in configuration design, workflow automation, server deployment, and multi-language software development

TECHNICAL SKILLS

Languages: Python, C#, SQL, Bash, Nix, HTML

Systems: Linux, NixOS, shell scripting, cron, SMB, DNS, remote server configuration

Developer Tools: Git, VS Code, Quarto, Hyprland, Cloudflare

Software Development: Object-oriented programming, UML, input validation, exception handling, debugging

Data & Analysis: Polars, scikit-learn, XGBoost, Random Forest, data visualization

PROJECTS

NixOS Reproducible Dev Environment

December 2025 - Present

Personal Project

Rexburg, ID

- Built a modular NixOS development environment supporting Python, C#, and Rust workflows
- Created reproducible Nix flake shells for isolated Python, C#, and Rust development toolchain
- Designed and automated rebuild, update, and Git workflows using shell functions and aliases
- Corrected package conflicts, editor integration failures, and Linux environment inconsistencies across multi-language workflows

Linux Server Deployment

September 2020 - Present

Independent Project

China

- Deployed and maintained a remote Linux server hosted in the United States for personal technical experimentation
- Configured domain registration, DNS routing, and reverse proxy services using Cloudflare for remote server access
- Implemented encrypted networking and proxy services for secure remote access and service routing
- Built and hosted static web pages using HTML to test and validate server configuration

C# Application Development

September 2025 - Present

Course Project

Rexburg, ID

- Developed console-based C# applications including a journaling system, scripture memorization tool, and guided activity programs with structured class design
- Formulated UML diagrams before implementation and added validation logic for reliable user input

Provincial Programming First Prize

January 2019

Programming Competition

China

- Designed and developed an English vocabulary learning application implementing 100+ word entries, quizzes, and automated feedback
- Awarded First Prize in a provincial programming competition; recognized as only first-place recipient from hometown city

RELEVANT EXPERIENCE

Independent Technical Work | *Technical Support & Repair* | Rexburg, ID | January 2020 - Present

- Diagnosed and repaired hardware and software issues across 10+ personal and family computers, resolving operating system failures and driver conflicts
- Corrected Windows system errors, driver conflicts, and operating system failures across 10+ systems and hardware configurations

EDUCATION

Computer Science | June 2028
